avi i... [...] CablesLAN is a small and free software, that allows you to check the connection between computers and your network using any kind of cable, and to then provide you with information about the speed of the connection, and the congestion of the cable. You can use it in combination with a USB cable or a WiFi dongle. So, if you want to check your network speed over USB, the following video will help you: Here is an example of the kind of information you can get from CablesLAN: CablesLAN 0.9.0.7 - Cross Platform, Free and Easy. By Silvio Noronha Website: Windows If the application is installed on a computer with more than one network adapter, CablesLAN will list them on the main screen. When you select a particular one, it will show you detailed information about its network speed and the status of the connection (if there is any connection at all). Linux You will see a desktop icon when the application is installed. Clicking it will give you a menu of network adapters that can be checked. Select one and it will show you detailed information about the network speed of the selected adapter. d11cf854-8453-4386-862d-4dfb27af37d7 movies xvid (2.8mb) ->>->>->> d11cf854-8453-4386-862d-4dfb27af37d7 movies xvid (2.8mb).avi i... [...] Get the latest version of Ubuntu 18.04 "Bionic Beaver" "Focal Fossa" released today for all supported 32-bit and 64-bit PCs, and all laptops and desktops (except for those using Intel NUCs and AMD socket FM2). Ubuntu 20.04 "Focal Fossa" should be released in April 2020 Ubuntu 18.04 LTS "Bionic Beaver" The long term support version of Ubuntu, 18.04 LTS, is the current version of Ubuntu and is supported with security updates for five years. It is the recommended version for most users. Ubuntu 20.04 LTS "Focal Fossa 82157476af
